# 1 - 800 - RENTAI - 1

Electric radiant heaters only warm people and objects, not the air in-between. The heat does not blow away, making them perfect for outdoor use. Great for temporary smoking areas during special events, modeling shoots, and entrance-ways. Also used to heat floor and wall surfaces during construction to avoid the need to heat the entire space.

- ✓ Each fixture emits 4,400 BTU's (1,300 watts) of heat
- ✓ Standard set up is two heaters per stand; however, heaters can be removed from stand or can be delivered with four per stand
- ✓ Requires 10.9 amps per fixture (plug into a 120 volt outlet)
- ✓ Set up only takes a few minutes
- ✓ Tripod adjustable to 12 feet tall
- ✓ Projects heat approximately 9 feet

*Floor mounted version used for stages, podiums, and other places where a low profile is preferred*
